

SWAG JK VENT COVER REPLACEMENT PANEL

In the kit there are 4 washers. These washers are to be double stacked on the bottom two holes between the tailgate and the new plates in the kit. This is to allow sufficient air flow in and out of your Jeep. If you don't use the washer your AC/Heater will not work well and it will be hard to close your doors if you are running a hard top. The inner aluminum plate does not need to be painted, however if you selected the unpowder coated vent cover plate you will need to paint the outer "JEEP" steel panel.
